

High pressure at FAME_(BM30) and FAME-UHD_(BM16) beamlines

D. Testemale
French CRG

Outline

- FAME and FAME-UHD beamlines
- Autoclaves
- EBS

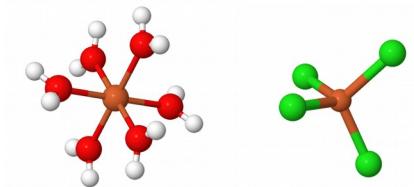

FAME and FAME-UHD beamlines

French **A**bsorption spectroscopy beamline in **M**aterial and **E**nvironmental sciences (BM30)

- X-ray Absorption Spectroscopy : speciation
- 4.8-40 keV – 100*200 μm V*H
- Concentration : >20ppm (organic) ; >200ppm (mineral)
- Solid state Canberra Ge detector

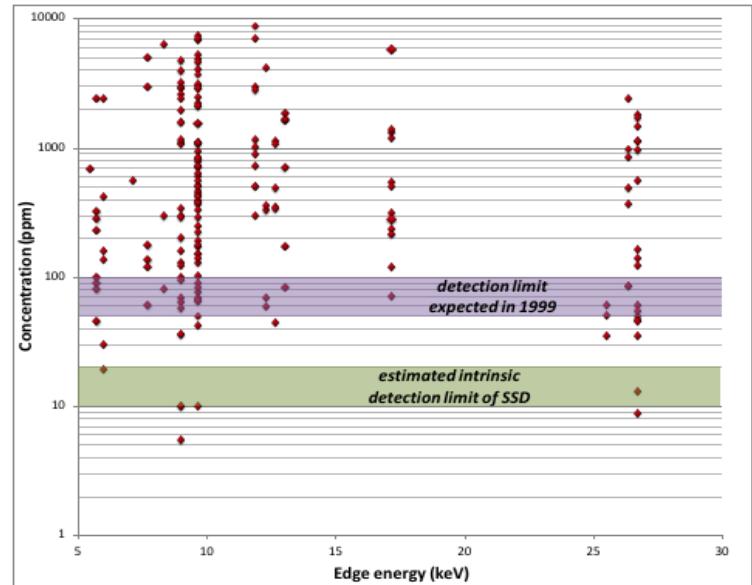

FAME and FAME-UHD beamlines

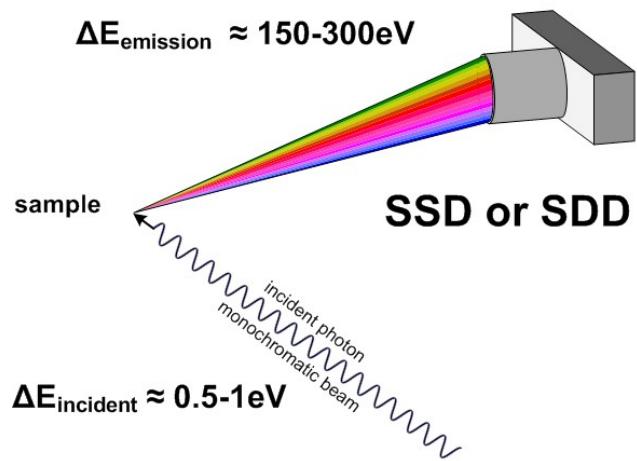

Environmental and Earth Sciences samples:

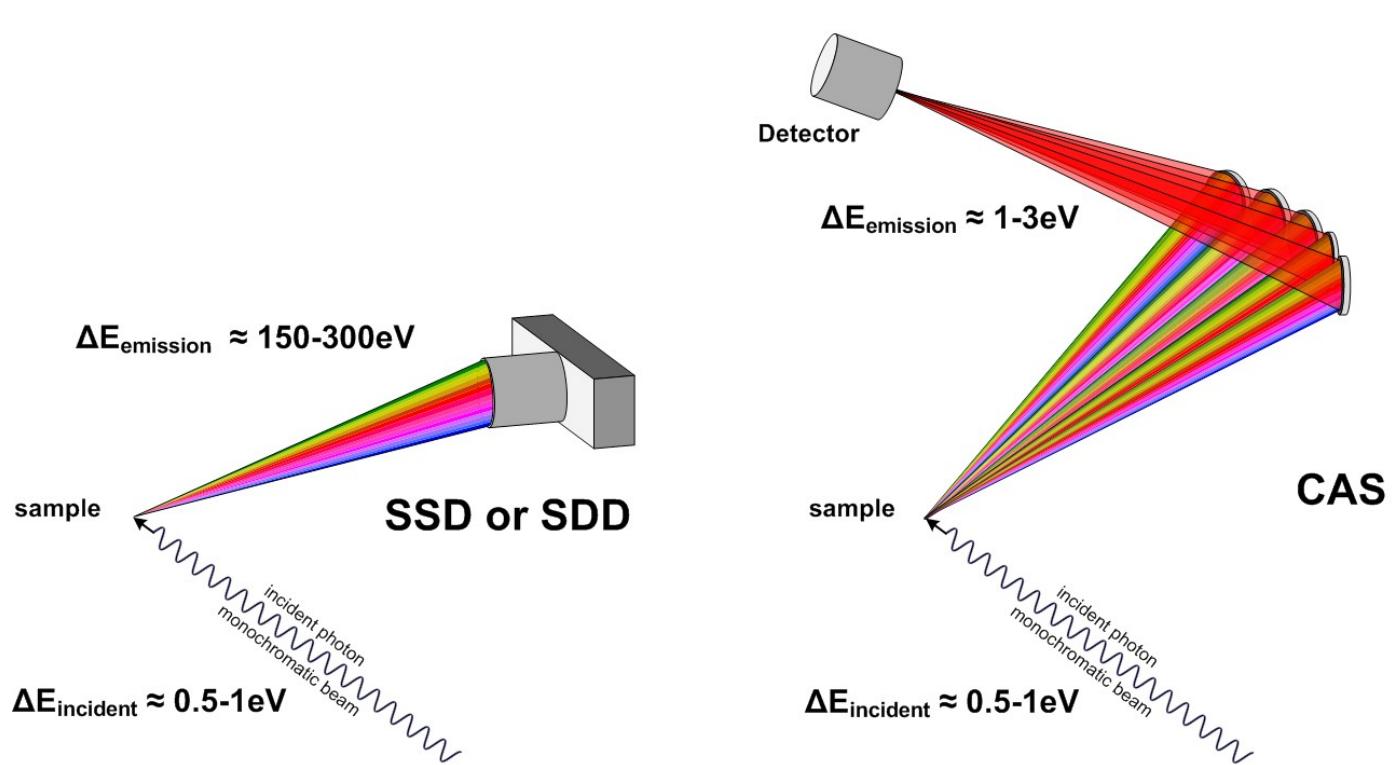

- Low concentration
 - Contain many elements
- strong S/N limitations for XAS

FAME and FAME-UHD beamlines

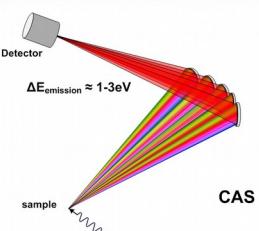

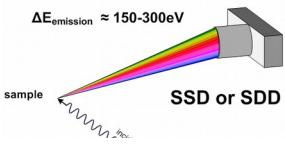

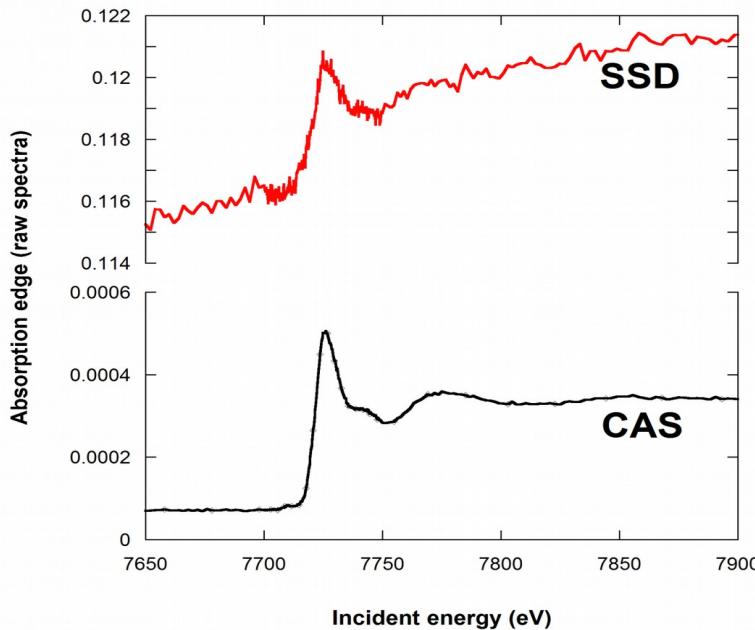

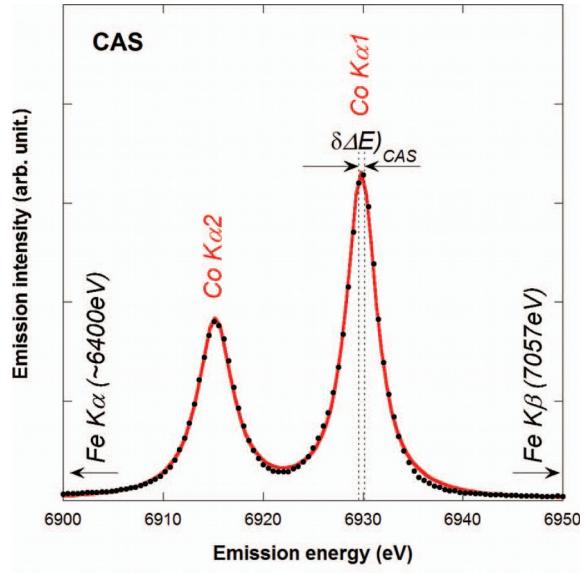

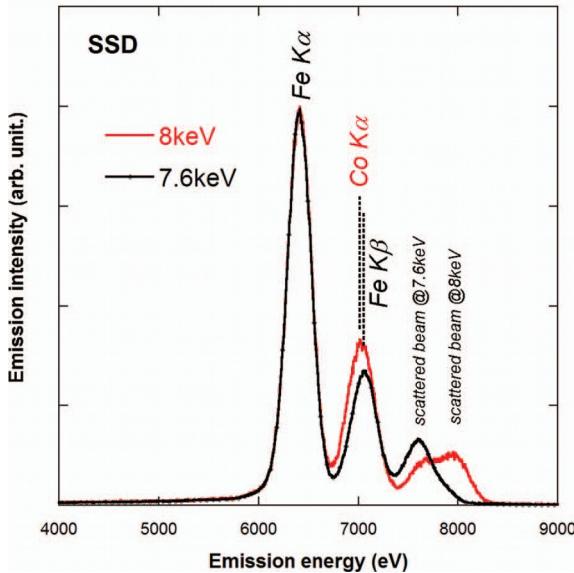

FAME and FAME-UHD beamlines

FAME and FAME-UHD beamlines

Co (layers) / Fe_2O_3 (substrate)

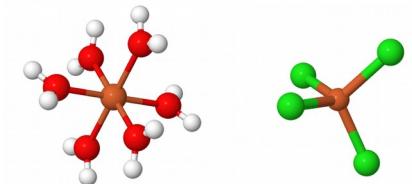

FAME and FAME-UHD beamlines

French **A**bsorption spectroscopy beamline in **M**aterial and **E**nvironmental sciences – **U**ltra **H**igh Dilution (BM16)

- X-ray Absorption Spectroscopy : speciation
- 4.8-20 keV - 100*200 µm V*H
- Concentration : >0.5 ppm
- Crystal Analyzer spectrometer

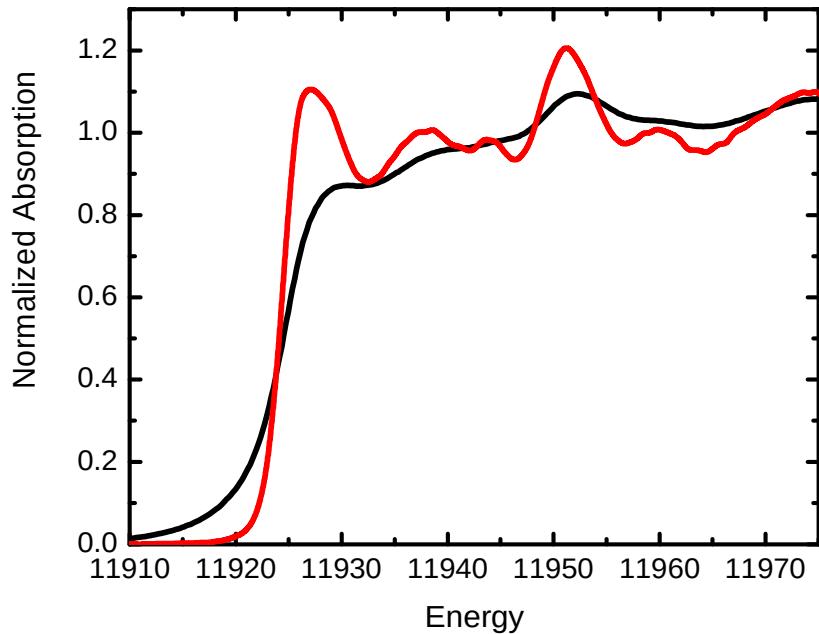

Hazemann et al., J. Synchr. Rad. (2009)

Hg L3-edge, JF Gaillard (Northwestern Uni.)

Outline

- FAME and FAME-UHD beamlines
- Autoclaves
- EBS

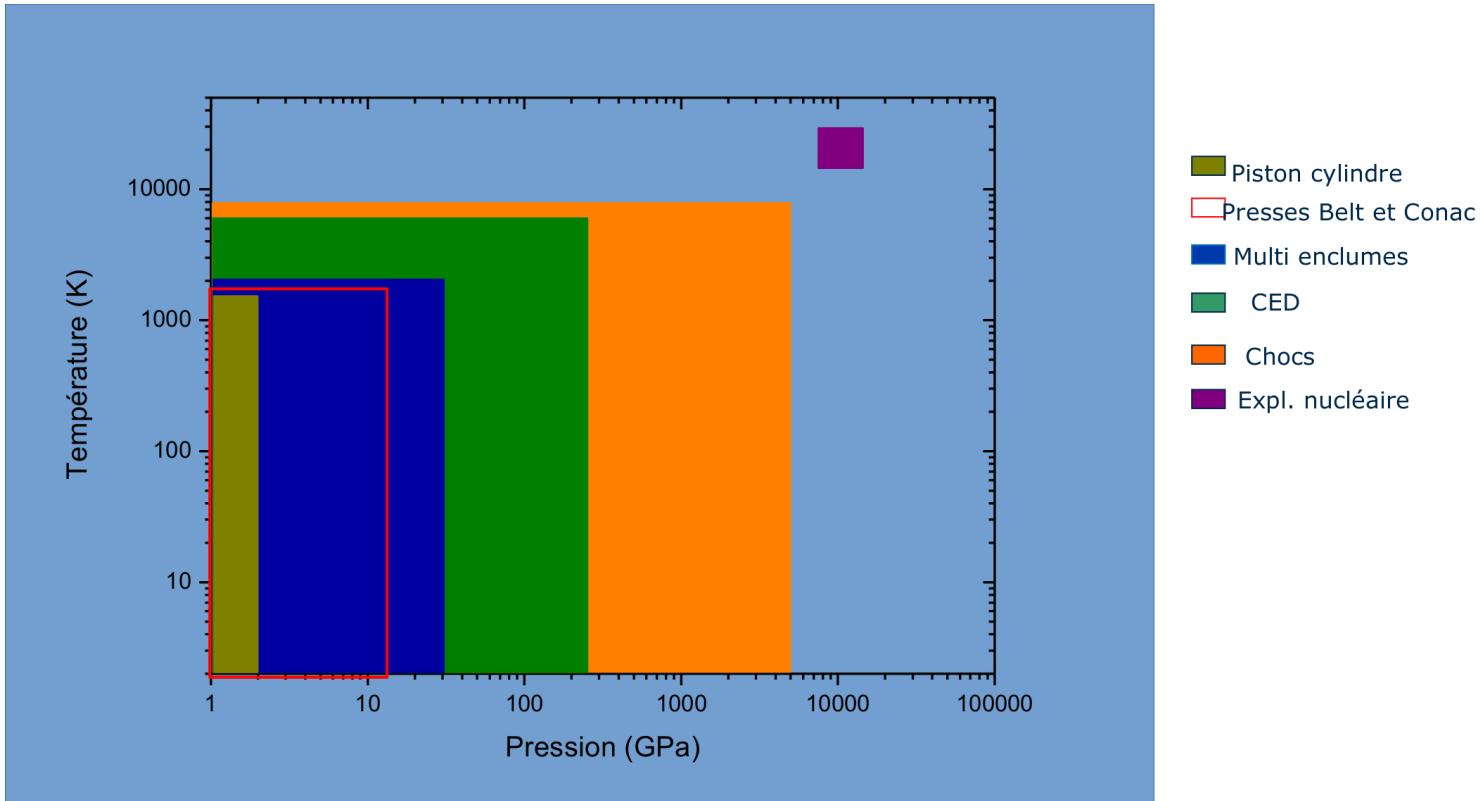

Autoclaves

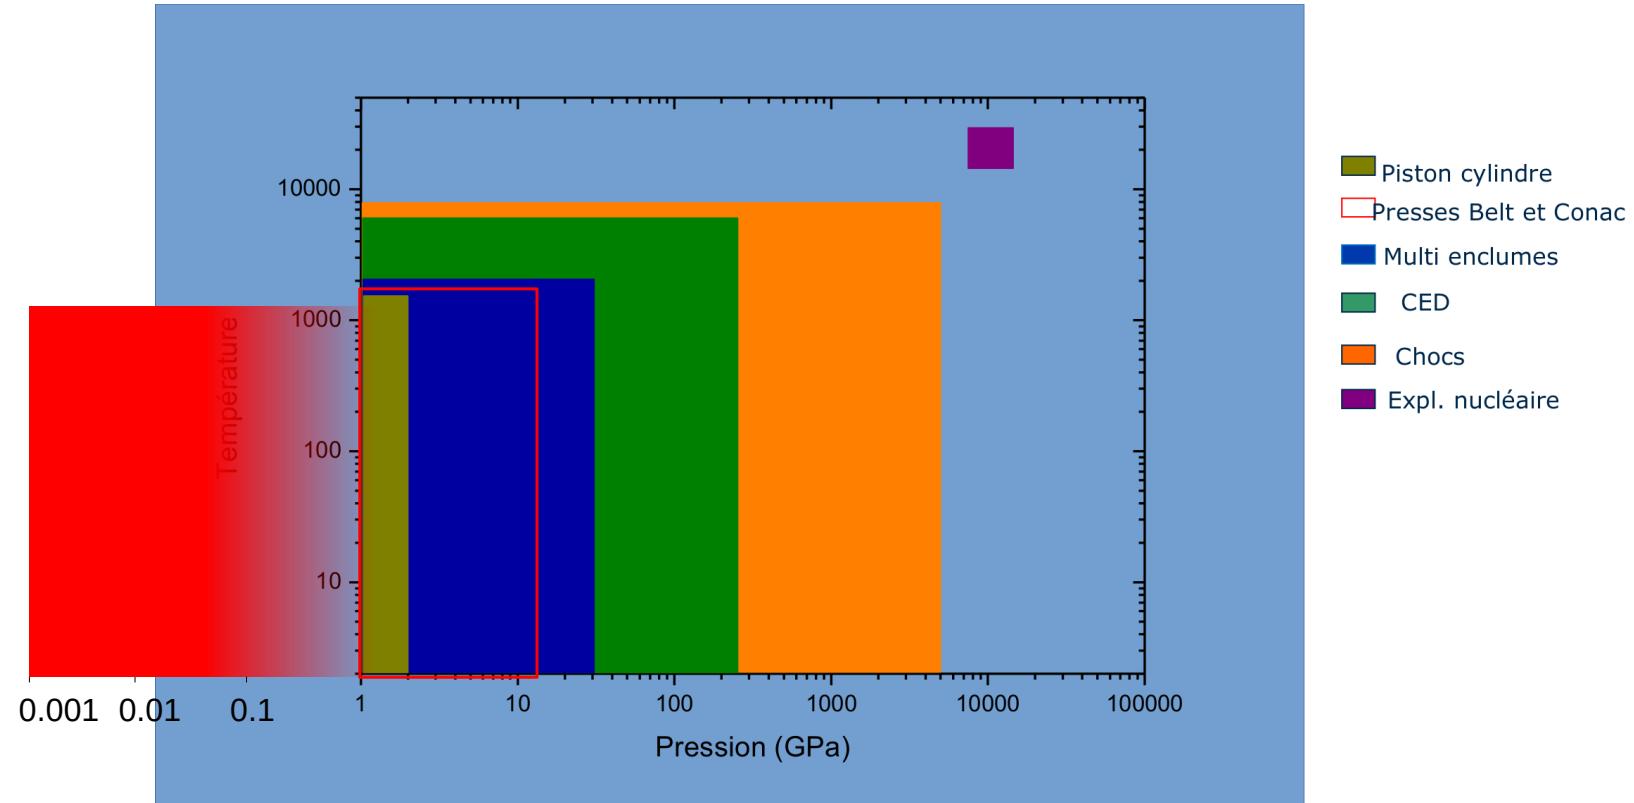

- [1-2000 bar]
[30-800°C]
- [gas-liquid-solid] densities
- 'macro' (ml) volume
- Multi-techniques
- Home-made

Testemale et al., Rev. Sci. Instrum. (2005)
Bruyère et al., J. Phys.: Conf. Series (2008)
Testemale et al., Rev. Sci. Instrum. (2016)

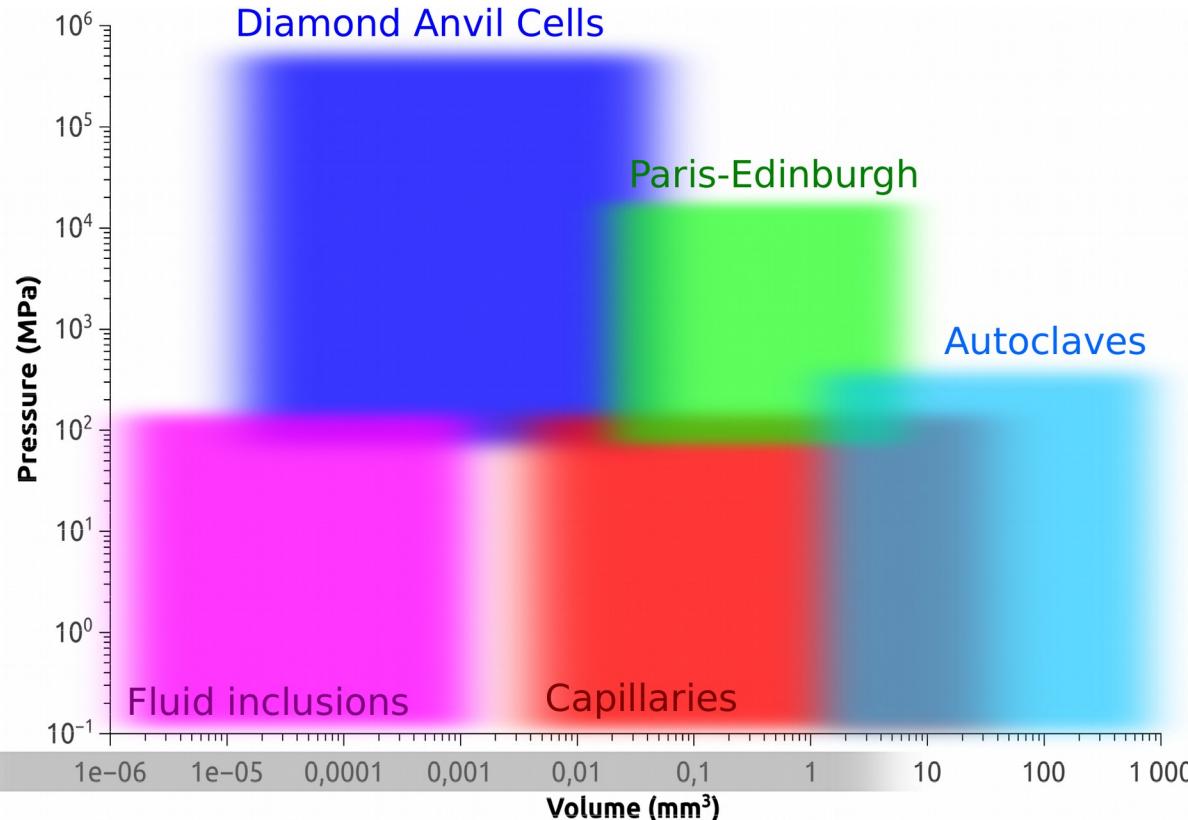

Autoclaves

Autoclaves

Autoclaves for spectroscopy of fluids

D. Testemale, J. Brugger, *Int. Tables for Crystallography: Volume I, X-ray Absorption Spectroscopy and Related Techniques; Cells for spectroscopy of fluids at elevated pressure and temperature*

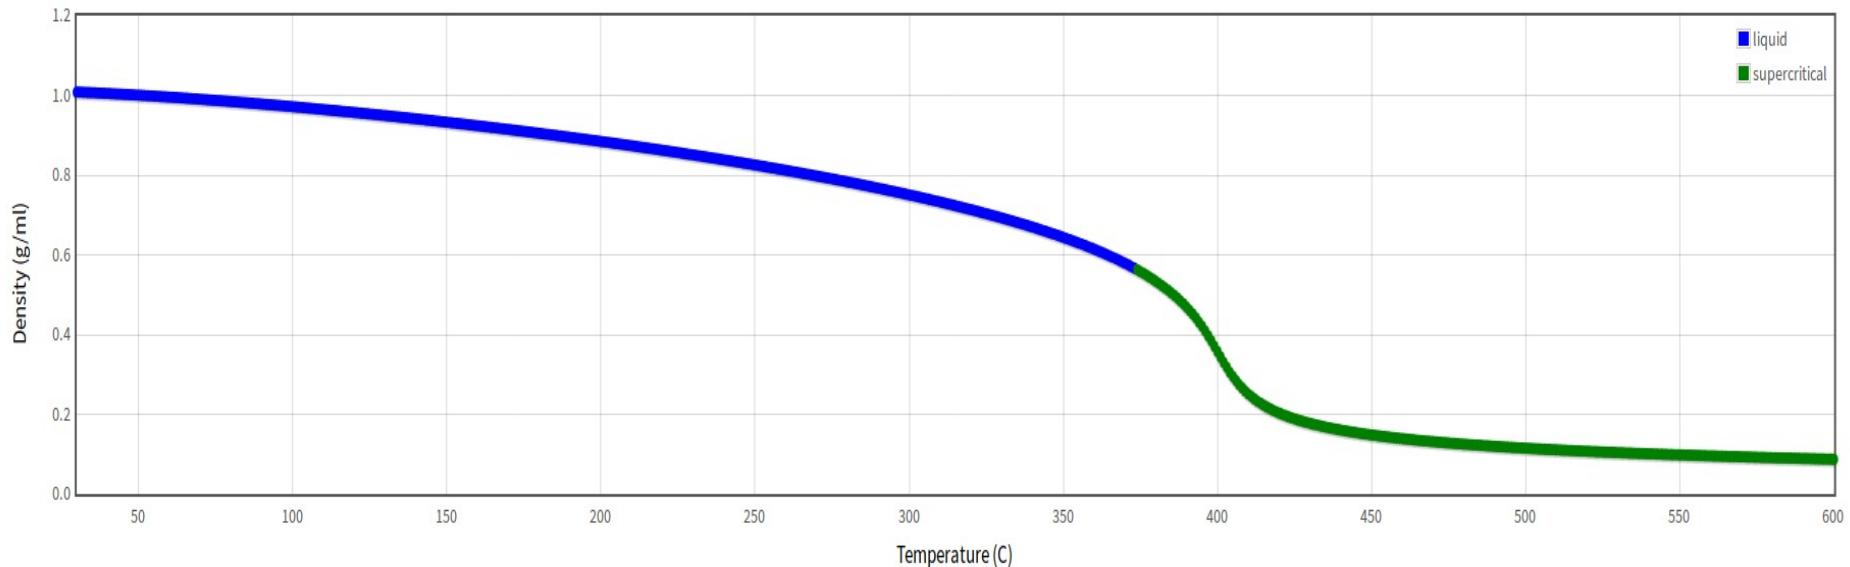

Autoclaves for spectroscopy of fluids

Large sample volume :

- Loading and **recovery** of samples
- Beam damage on fluids :
 - radiolytic species
 - sample vol./beam vol. ratio
 - uncontrolled **redox**
 - key aspect of speciation studies

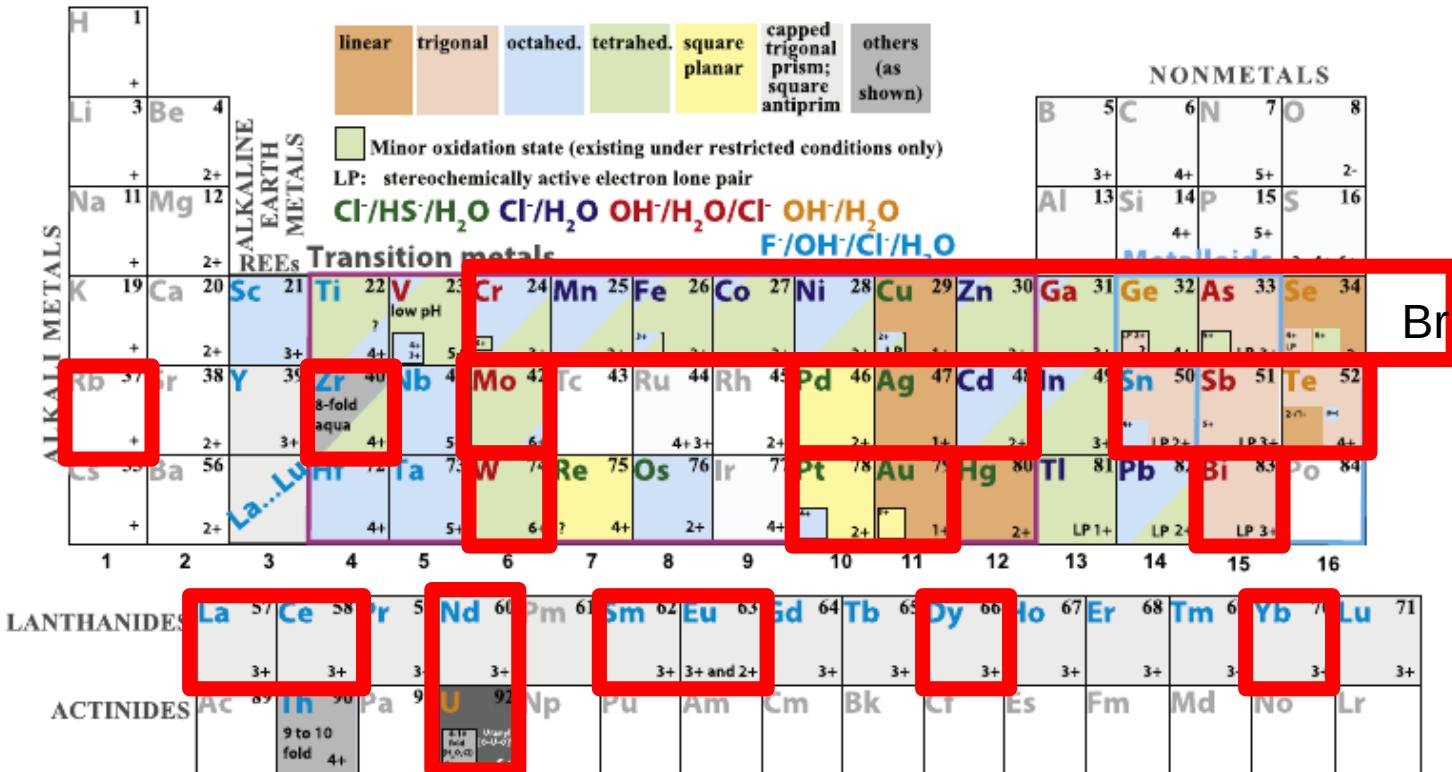

Autoclaves @ FAME and FAME-UHD

- Smooth **integration** on the beamlines (routine)
- Low concentrations (**> 50 ppm**)
- Very good data quality (fluids at HT !)
- Optimization of materials
- Very stable control of T and P ($\pm 0.05^\circ\text{C}$; ± 0.3 bar)

Autoclaves @ FAME - Examples

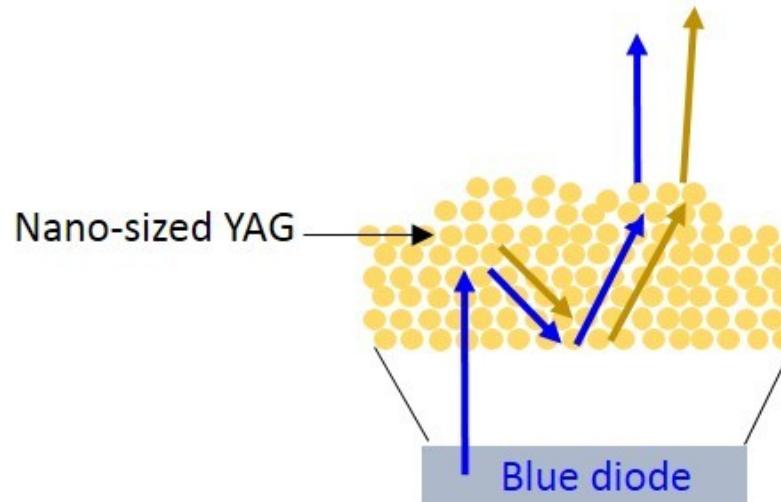

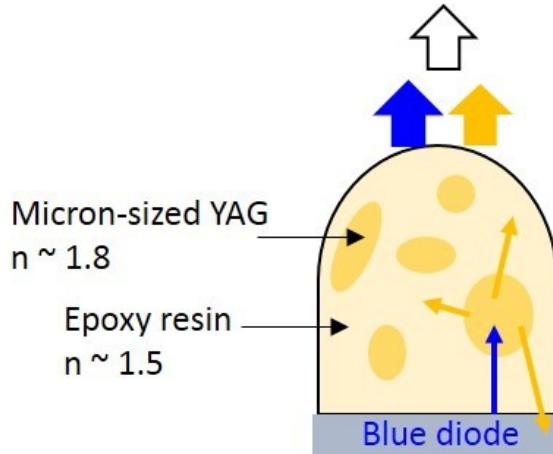

- See G. Pokrovski and M. Louvel talks.

Autoclaves @ FAME-UHD - Examples

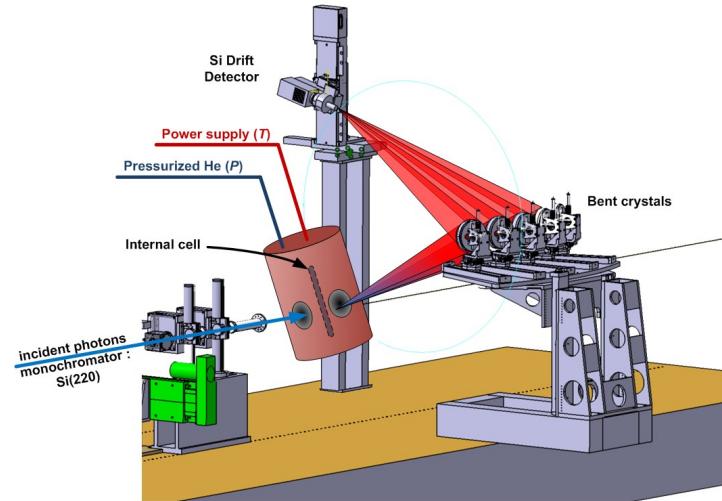

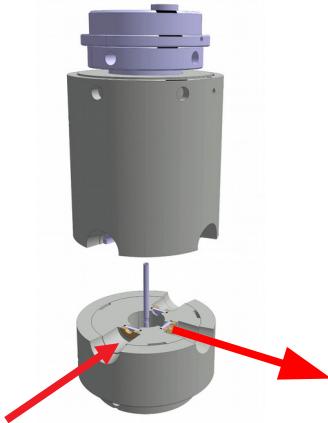

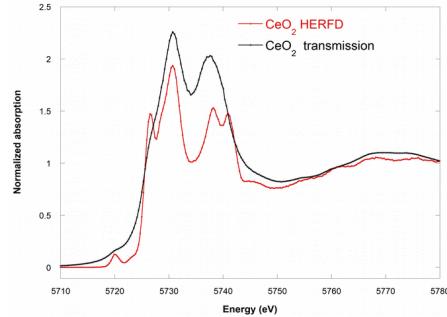

Nano YAG:Ce for LED applications

- Hydrothermal synthesis
- In situ HERFD XANES (200 bar ; 400°C)
- Redox of cerium ?

Results - Ce redox during synthesis

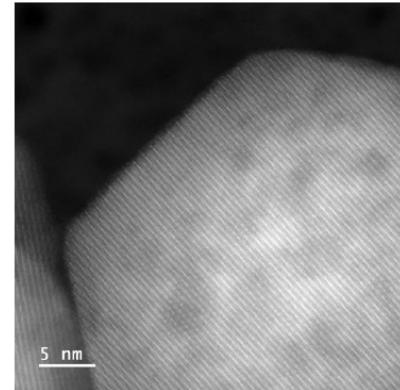

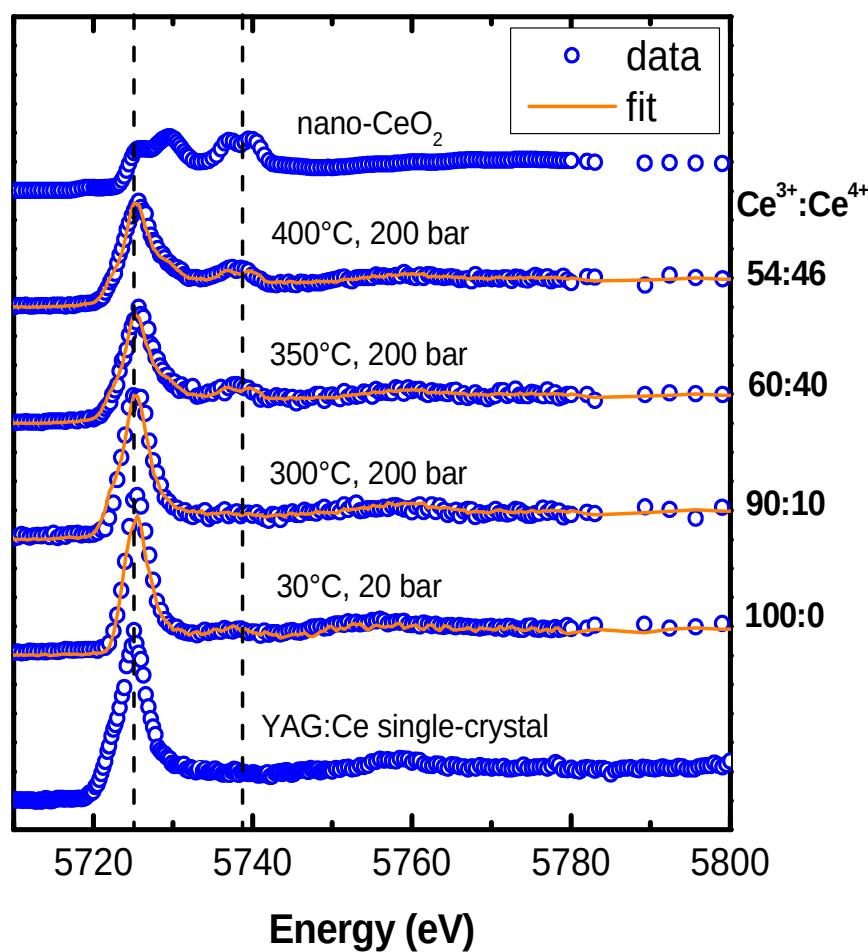

In situ (HERFD) XAS measurements : monitoring of redox $\text{Ce}^{3+} \rightarrow \text{Ce}^{4+}$

Experimental challenges :

- Low concentrations (1 % Ce in suspended nanos)
- In situ HP/HT sample environment
- Low X-rays energy (5.7 keV)
- Post mortem sample recovery

Autoclaves @ FAME-UHD - Examples

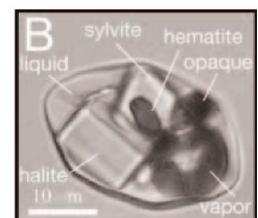

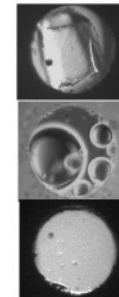

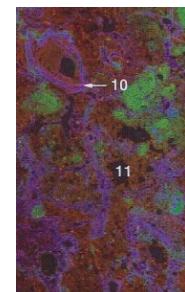

Outline

- FAME and FAME-UHD beamlines
- Autoclaves
- EBS

Environmental and Earth Sciences samples:

- Low concentration
- Contain many elements
- Inhomogeneous or small

Study of real/natural samples :

- **Diluted** samples :
 >10 ppm on FAME
 >0.1 ppm on FAME-UHD
- **Inhomogeneous** samples :
 ~ $30 \times 30 \mu\text{m}^2$ on FAME or $1 \times 1 \mu\text{m}^2$ (KB)
 ~ $30 \times 30 \mu\text{m}^2$ on FAME-UHD
- Facilitation of **In situ, In operando** measurements

Thank you !
